This library will let you use an Adafruit Fingerprint sensor on any UART to get, store, retrieve and query fingerprints! Great for adding bio-sensing security to your next build.

CHAPTER 1

Dependencies

This driver depends on:

- [Adafruit CircuitPython](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

CHAPTER 2

Installing from PyPI

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-fingerprint
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-fingerprint
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-fingerprint
```

CHAPTER 3

Usage Example

See 'examples' folder for full usage demo!

CHAPTER 4

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 5

Documentation

For information on building library documentation, please check out [this guide](#).

6.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/fingerprint_simpletest.py

```
1 import time
2 import board

6.2 adafruit_fingerprint

This library will let you use an Adafruit Fingerprint sensor on any UART to get, store, retrieve and query fingerprints! Great for adding bio-sensing security to your next build.

- Author(s): ladyada

6.2.1 Implementation Notes

Hardware:

- [Fingerprint sensor](#) (Product ID: 751)

Software and Dependencies:

- Adafruit CircuitPython firmware (2.2.0+) for the ESP8622 and M0-based boards: <https://github.com/adafruit/circuitpython/releases>

class `adafruit_fingerprint.Adafruit_Fingerprint` (*uart, passwd=(0, 0, 0, 0)*)

UART based fingerprint sensor.

count_templates ()

Requests the sensor to count the number of templates and stores it in `self.template_count`. Returns the packet error code or OK success

create_model ()

Requests the sensor take the template data and turn it into a model returns the packet error code or OK success

delete_model (*location*)

Requests the sensor delete a model from flash memory given by the argument location. Returns the packet error code or OK success

finger_fast_search ()

Asks the sensor to search for a matching fingerprint template to the last model generated. Stores the location and confidence in `self.finger_id` and `self.confidence`. Returns the packet error code or OK success

get_image ()

Requests the sensor to take an image and store it memory, returns the packet error code or OK success

image_2_tz (*slot*)

Requests the sensor convert the image to a template, returns the packet error code or OK success

read_templates ()

Requests the sensor to list of all template locations in use and stores them in `self.templates`. Returns the packet error code or OK success

store_model (*location*)

Requests the sensor store the model into flash memory and assign a location. Returns the packet error code or OK success

verify_password ()

Checks if the password/connection is correct, returns True/False
