CircuitPython driver for use with IR Receivers.

Examples of products to use this library with:

- [Circuit Playground Express](#)
- [IR Receiver Sensor](#)

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- Adafruit CircuitPython

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the Adafruit library and driver bundle.

# CHAPTER 2

---

## Installing from PyPI

---

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-irremote
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-irremote
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-irremote
```

# CHAPTER 3

---

## Usage Example

---

```
# Circuit Playground Express Demo Code
# Adjust the pulseio 'board.PIN' if using something else
import pulseio
import board
import adafruit_irremote

pulsein = pulseio.PulseIn(board.REMOTEIN, maxlen=120, idle_state=True)
decoder = adafruit_irremote.GenericDecode()

# size must match what you are decoding! for NEC use 4
received_code = bytearray(4)

while True:
    pulses = decoder.read_pulses(pulsein)
    print("Heard", len(pulses), "Pulses:", pulses)
    try:
        code = decoder.decode_bits(pulses, debug=False)
        print("Decoded:", code)
    except adafruit_irremote.IRNECREpeatException: # unusual short code!
        print("NEC repeat!")
    except adafruit_irremote.IRDecodeException as e:      # failed to decode
        print("Failed to decode: ", e.args)

    print("-----")
```

# CHAPTER 4

---

## Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

# CHAPTER 5

---

## Documentation

---

For information on building library documentation, please check out [this guide](#).

# CHAPTER 6

---

## Table of Contents

---

### 6.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/irremote\_simpletest.py

```
1 # Circuit Playground Express Demo Code
2 # Adjust the pulseio 'board.PIN' if using something else
3 import pulseio
4 import board
5 import adafruit_irremote
6 pulsein = pulseio.PulseIn(board.REMOTEIN, maxlen=120, idle_state=True)
7 decoder = adafruit_irremote.GenericDecode()
8
9 # size must match what you are decoding! for NEC use 4
10 received_code = bytearray(4)
11
12 while True:
13     pulses = decoder.read_pulses(pulsein)
14     print("Heard", len(pulses), "Pulses:", pulses)
15     try:
16         code = decoder.decode_bits(pulses)
17         print("Decoded:", code)
18     except adafruit_irremote.IRNECRepeatException: # unusual short code!
19         print("NEC repeat!")
20     except adafruit_irremote.IRDecodeException as e:      # failed to decode
21         print("Failed to decode: ", e.args)
22
23     print("-----")
```

## 6.2 adafruit\_irremote

Demo code for Circuit Playground Express:

```
# Circuit Playground Express Demo Code
# Adjust the pulseio 'board.PIN' if using something else
import pulseio
import board
import adafruit_irremote

pulsein = pulseio.PulseIn(board.REMOTEIN, maxlen=120, idle_state=True)
decoder = adafruit_irremote.GenericDecode()

# size must match what you are decoding! for NEC use 4
received_code = bytearray(4)

while True:
    pulses = decoder.read_pulses(pulsein)
    print("Heard", len(pulses), "Pulses:", pulses)
    try:
        code = decoder.decode_bits(pulses)
        print("Decoded:", code)
    except adafruit_irremote.IRNCRRepeatException: # unusual short code!
        print("NEC repeat!")
    except adafruit_irremote.IRDecodeException as e:      # failed to decode
        print("Failed to decode: ", e.args)

    print("-----")
```

- Author(s): Scott Shawcroft

### 6.2.1 Implementation Notes

#### Hardware:

- CircuitPlayground Express
- IR Receiver Sensor

#### Software and Dependencies:

- Adafruit CircuitPython firmware for the ESP8622 and M0-based boards: <https://github.com/adafruit/circuitpython/releases>

```
class adafruit_irremote.GenericDecode
    Generic decoding of infrared signals

    bin_data(pulses)
        Compute bins of pulse lengths where pulses are +-25% of the average.

        Parameters pulses (list) – Input pulse lengths

    decode_bits(pulses)
        Decode the pulses into bits.

    read_pulses(input_pulses, *, max_pulse=10000, blocking=True, pulse_window=0.1, blocking_delay=0.1)
        Read out a burst of pulses until pulses stop for a specified period (pulse_window), pruning pulses after a
        pulse longer than max_pulse.
```

#### Parameters

- **input\_pulses** (*PulseIn*) – Object to read pulses from
- **max\_pulse** (*int*) – Pulse duration to end a burst
- **blocking** (*bool*) – If True, will block until pulses found. If False, will return None if no pulses. Defaults to True for backwards compatibility
- **pulse\_window** (*float*) – pulses are collected for this period of time
- **blocking\_delay** (*float*) – delay between pulse checks when blocking

```
class adafruit_irremote.GenericTransmit(header, one, zero, trail)
```

Generic infrared transmit class that handles encoding.

```
transmit(pulseout, data)
```

Transmit the data using the pulseout.

#### Parameters

- **pulseout** (*pulseio.PulseOut*) – PulseOut to transmit on
- **data** (*bytarray*) – Data to transmit

```
exception adafruit_irremote.IRDecodeException
```

Generic decode exception

```
exception adafruit_irremote.IRNECRepeatException
```

Exception when a NEC repeat is decoded
