VC0706 serial TTL camera module. Allows basic image capture and download of image data from the camera over a serial connection. See examples for demo of saving image to a SD card (must be wired up separately).

CHAPTER 1

Dependencies

This driver depends on:

- Adafruit CircuitPython

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the Adafruit library and driver bundle.

CHAPTER 2

Usage Example

See examples/snapshot.py.

CHAPTER 3

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 4

API Reference

4.1 adafruit_vc0706

VC0706 serial TTL camera module. Allows basic image capture and download of image data from the camera over a serial connection. See examples for demo of saving image to a SD card (must be wired up separately).

- Author(s): Tony DiCola

class adafruit_vc0706.**VC0706**(rx, tx, *, baudrate=38400, timeout=250, buffer_size=100)
Driver for VC0706 serial TTL camera module.

Parameters

- **rx** (*Pin*) – Receive pin
- **tx** (*Pin*) – Transmit pin
- **baudrate** (*int*) – Serial connection speed
- **timeout** (*int*) – Read timeout in seconds
- **buffer_size** (*int*) – Receive buffer size

frame_length

Return the length in bytes of the currently capture frame/picture.

image_size

Get the current image size, will return a value of IMAGE_SIZE_640x480, IMAGE_SIZE_320x240, or IMAGE_SIZE_160x120.

read_picture_into(buf)

Read the next bytes of frame/picture data into the provided buffer. Returns the number of bytes written to the buffer (might be less than the size of the buffer). Buffer MUST be a multiple of 4 and 100 or less. Suggested buffer size is 32.

take_picture()

Tell the camera to take a picture. Returns True if successful.

version

Return camera version byte string.
