	<b>Python Module Index</b>	<b>15</b>

This is a CircuitPython driver for the AM2320 temperature and humidity sensor.

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- [Adafruit CircuitPython](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

## CHAPTER 2

---

### Usage Example

---

See `am2320_simpletest.py` in the examples folder.

## CHAPTER 3

---

### Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

### 4.1 Zip release files

To build this library locally you'll need to install the `circuitpython-build-tools` package.

```
python3 -m venv .env
source .env/bin/activate
pip install circuitpython-build-tools
```

Once installed, make sure you are in the virtual environment:

```
source .env/bin/activate
```

Then run the build:

```
circuitpython-build-bundles --filename_prefix adafruit-circuitpython-am2320 --library_
↪location .
```

### 4.2 Sphinx documentation

Sphinx is used to build the documentation based on rST files and comments in the code. First, install dependencies (feel free to reuse the virtual environment from above):

```
python3 -m venv .env
source .env/bin/activate
pip install Sphinx sphinx-rtd-theme
```

Now, once you have the virtual environment activated:

```
cd docs
sphinx-build -E -W -b html . _build/html
```

This will output the documentation to `docs/_build/html`. Open the `index.html` in your browser to view them. It will also (due to `-W`) error out on any warning like Travis will. This is a good way to locally verify it will pass.

## 5.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/am2320\_simpletest.py

```
1 import time
2 import board
3 import busio
4 import adafruit_am2320
5
6 # create the I2C shared bus
7 i2c = busio.I2C(board.SCL, board.SDA)
8 am = adafruit_am2320.AM2320(i2c)
9
10 while True:
11     print("Temperature: ", am.temperature)
12     print("Humidity: ", am.relative_humidity)
13     time.sleep(2)
```

## 5.2 adafruit\_am2320

This is a CircuitPython driver for the AM2320 temperature and humidity sensor.

- Author(s): Limor Fried

### 5.2.1 Implementation Notes

#### Hardware:

- Adafruit AM2320 Temperature & Humidity Sensor (Product ID: 3721)

### Software and Dependencies:

- **Adafruit CircuitPython firmware for the ESP8622 and M0-based boards:** <https://github.com/adafruit/circuitpython/releases>
- Adafruit's Bus Device library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_BusDevice](https://github.com/adafruit/Adafruit_CircuitPython_BusDevice)

**class** `adafruit_am2320.AM2320` (*i2c\_bus*, *address=92*)

A driver for the AM2320 temperature and humidity sensor.

#### Parameters

- **`i2c_bus`** – The `busio.I2C` object to use. This is the only required parameter.
- **`address`** (*int*) – (optional) The I2C address of the device.

#### **`relative_humidity`**

The measured relative humidity in percent.

#### **`temperature`**

The measured temperature in celsius.

## CHAPTER 6

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

**a**

`adafruit_am2320`, 11

## A

adafruit\_am2320 (module), [11](#)  
AM2320 (class in adafruit\_am2320), [12](#)

## R

relative\_humidity (adafruit\_am2320.AM2320 attribute),  
[12](#)

## T

temperature (adafruit\_am2320.AM2320 attribute), [12](#)
