CircuitPython driver for the [INA219](#) current sensor.

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- [Adafruit CircuitPython](#)
- [Bus Device](#)
- [Register](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

## CHAPTER 2

---

### Installing from PyPI

---

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-ina219
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-ina219
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-ina219
```

## CHAPTER 3

---

### Usage Example

---

see [example](#)

## CHAPTER 4

---

### Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

## CHAPTER 5

---

### Documentation

---

For information on building library documentation, please check out [this guide](#).

## 6.1 Simple test

Ensure your device works with this simple test.

(continued from previous page)

```

27 ina219.bus_adc_resolution = ADCResolution.ADCRES_12BIT_32S
28 ina219.shunt_adc_resolution = ADCResolution.ADCRES_12BIT_32S
29 # optional : change voltage range to 16V
30 ina219.bus_voltage_range = BusVoltageRange.RANGE_16V
31
32 # measure and display loop
33 while True:
34     bus_voltage = ina219.bus_voltage # voltage on V- (load side)
35     shunt_voltage = ina219.shunt_voltage # voltage between V+ and V- across the shunt
36     current = ina219.current # current in mA
37     power = ina219.power # power in watts
38
39     # INA219 measure bus voltage on the load side. So PSU voltage = bus_voltage +
↪ shunt_voltage
40     print("Voltage (VIN+) : {:6.3f} V".format(bus_voltage + shunt_voltage))
41     print("Voltage (VIN-) : {:6.3f} V".format(bus_voltage))
42     print("Shunt Voltage : {:8.5f} V".format(shunt_voltage))
43     print("Shunt Current : {:7.4f} A".format(current / 1000))
44     print("Power Calc. : {:8.5f} W".format(bus_voltage * (current / 1000)))
45     print("Power Register : {:6.3f} W".format(power))
46     print("")
47
48     # Check internal calculations haven't overflowed (doesn't detect ADC overflows)
49     if ina219.overflow:
50         print("Internal Math Overflow Detected!")
51         print("")
52
53     time.sleep(2)

```

## 6.2 adafruit\_ina219

CircuitPython driver for the INA219 current sensor.

- Author(s): Dean Miller

### 6.2.1 Implementation Notes

#### Hardware:

- Adafruit INA219 High Side DC Current Sensor Breakout
- Adafruit INA219 FeatherWing

#### Software and Dependencies:

- Adafruit CircuitPython firmware (2.2.0+) for the ESP8622 and M0-based boards: <https://github.com/adafruit/circuitpython/releases>
- Adafruit's Bus Device library: [https://github.com/adafruit/Adafruit\\_CircuitPython\\_BusDevice](https://github.com/adafruit/Adafruit_CircuitPython_BusDevice)

**class** adafruit\_ina219.**ADCResolution**  
 Constants for bus\_adc\_resolution or shunt\_adc\_resolution

**class** adafruit\_ina219.**BusVoltageRange**  
 Constants for bus\_voltage\_range

**class** adafruit\_ina219.**Gain**

Constants for gain

**class** adafruit\_ina219.**INA219** (*i2c\_bus*, *addr=64*)

Driver for the INA219 current sensor

**bus\_voltage**

The bus voltage (between V- and GND) in Volts

**calibration**

Calibration register (cached value)

**current**

The current through the shunt resistor in milliamps.

**power**

The power through the load in Watt.

**set\_calibration\_16V\_400mA** ()

Configures to INA219 to be able to measure up to 16V and 400mA of current. Counter overflow occurs at 1.6A.

---

**Note:** These calculations assume a 0.1 ohm shunt resistor is present

---

**set\_calibration\_16V\_5A** ()

Configures to INA219 to be able to measure up to 16V and 5000mA of current. Counter overflow occurs at 8.0A.

---

**Note:** These calculations assume a 0.02 ohm shunt resistor is present

---

**set\_calibration\_32V\_1A** ()

Configures to INA219 to be able to measure up to 32V and 1A of current. Counter overflow occurs at 1.3A.

---

**Note:** These calculations assume a 0.1 ohm shunt resistor is present

---

**set\_calibration\_32V\_2A** ()

Configures to INA219 to be able to measure up to 32V and 2A of current. Counter overflow occurs at 3.2A.

..note :: These calculations assume a 0.1 shunt ohm resistor is present

**shunt\_voltage**

The shunt voltage (between V+ and V-) in Volts (so +/-0.327V)

**class** adafruit\_ina219.**Mode**

Constants for mode

## CHAPTER 7
