CircuitPython driver for the IS31FL3731 charlieplex IC.

This driver supports the following hardware:

- Adafruit 16x9 Charlieplexed PWM LED Matrix Driver - IS31FL3731
- Adafruit 15x7 CharliePlex LED Matrix Display FeatherWings

# CHAPTER 1

---

## Dependencies

---

This driver depends on:

- Adafruit CircuitPython

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the Adafruit library and driver bundle.

# CHAPTER 2

---

## Usage Example

---

Matrix:

```
import adafruit_is31fl3731
import board
import busio
with busio.I2C(board.SCL, board.SDA) as i2c:
    display = adafruit_is31fl3731.Matrix(i2c)
    display.fill(127)
```

Charlie Wing:

```
import adafruit_is31fl3731
import board
import busio
with busio.I2C(board.SCL, board.SDA) as i2c:
    display = adafruit_is31fl3731.CharlieWing(i2c)
    display.fill(127)

    # Turn off pixel 4,4, change its brightness and turn it back on
    display.pixel(4, 4, 0)    # Turn off.
    display.pixel(4, 4, 50)   # Low brightness (50)
    display.pixel(4, 4, 192)  # Higher brightness (192)
```

# CHAPTER 3

---

## Contributing

---

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

# CHAPTER 4

---

## Building locally

---

To build this library locally you'll need to install the `circuitpython-build-tools` package.

```
python3 -m venv .env
source .env/bin/activate
pip install circuitpython-build-tools
```

Once installed, make sure you are in the virtual environment:

```
source .env/bin/activate
```

Then run the build:

```
circuitpython-build-bundles --filename_prefix adafruit-circuitpython-is31fl3731 --
˓→library_location .
```

## 4.1 Sphinx documentation

Sphinx is used to build the documentation based on rST files and comments in the code. First, install dependencies (feel free to reuse the virtual environment from above):

```
python3 -m venv .env
source .env/bin/activate
pip install Sphinx sphinx-rtd-theme
```

Now, once you have the virtual environment activated:

```
cd docs
sphinx-build -E -W -b html . _build/html
```

This will output the documentation to `docs/_build/html`. Open the `index.html` in your browser to view them. It will also (due to `-W`) error out on any warning like Travis will. This is a good way to locally verify it will pass.

# CHAPTER 5

---

## Table of Contents

---

### 5.1 Simple test

Ensure your device works with this simple test.

Listing 1: examples/is31fl3731\_simpletest.py

```
1 import board
2 import busio
3 import adafruit_is31fl3731
4
5
6 with busio.I2C(board.SCL, board.SDA) as i2c:
7     # initialize display using Feather CharlieWing LED 15 x 7
8     display = adafruit_is31fl3731.CharlieWing(i2c)
9     # uncomment next line if you are using Adafruit 16x9 Charlieplexed PWM LED Matrix
10    #display = adafruit_is31fl3731.Matrix(i2c)
11
12    # draw a box on the display
13    # first draw the top and bottom edges
14    for x in range(display.width):
15        display.pixel(x, 0, 50)
16        display.pixel(x, display.height - 1, 50)
17    # now draw the left and right edges
18    for y in range(display.height):
19        display.pixel(0, y, 50)
20        display.pixel(display.width - 1, y, 50)
```

For other examples, see the GitHub examples folder.

### 5.2 adafruit\_is31fl3731

CircuitPython driver for the IS31FL3731 charlieplex IC.

- Author(s): Tony DiCola

### 5.2.1 Implementation Notes

#### Hardware:

- Adafruit 16x9 Charlieplexed PWM LED Matrix Driver - IS31FL3731
- Adafruit 15x7 CharliePlex LED Matrix Display FeatherWings

#### Software and Dependencies:

- Adafruit CircuitPython firmware (2.2.0+) for the ESP8622 and M0-based boards: <https://github.com/adafruit/circuitpython/releases>

```
class adafruit_is31fl3731.CharlieWing(i2c, address=116)
    Supports the Charlieplexed feather wing

    static pixel_addr(x, y)
        Calulate the offset into the device array for x,y pixel

class adafruit_is31fl3731.Matrix(i2c, address=116)
    The Matrix class support the main function for driving the 16x9 matrix Display
```

#### Parameters

- **i2c\_device** (*i2c\_device*) – the connected i2c bus *i2c\_device*
- **address** – the device address; defaults to 0x74

```
audio_play(sample_rate, audio_gain=0, agc_enable=False, agc_fast=False)
    Controls the audio play feature
```

```
audio_sync(value=None)
    Set the audio sync feature register
```

```
autoplay(delay=0, loops=0, frames=0)
    Start autoplay
```

#### Parameters

- **delay** – in ms
- **loops** – number of loops - 0->7
- **frames** – number of frames: 0->7

```
blink(rate=None)
    Updates the blink register
```

```
fade(fade_in=None, fade_out=None, pause=0)
    Start and stop the fade feature. If both fade_in and fade_out are None (the default), the breath feature is used for fading. if fade_in is None, then fade_in = fade_out. If fade_out is None, then fade_out = fade_in
```

#### Parameters

- **fade\_in** – positive number; 0->100
- **fade\_out** – positive number; 0->100
- **pause** – breath register 2 pause value

```
fill(color=None, blink=None, frame=None)
    Fill the display with a brightness level
```

#### Parameters

- **color** – brightness 0->255
- **blink** – True if blinking is required
- **frame** – which frame to fill 0->7

**frame** (*frame*=None, *show*=True)

Set the current frame

#### Parameters

- **frame** – frame number; 0-7 or None. If None function returns current frame
- **show** – True to show the frame; False to not show.

**pixel** (*x*, *y*, *color*=None, *blink*=None, *frame*=None)

Blink or brightness for x-, y-pixel

#### Parameters

- **x** – horizontal pixel position
- **y** – vertical pixel position
- **color** – brightness value 0->255
- **blink** – True to blink
- **frame** – the frame to set the pixel

**static pixel\_addr** (*x*, *y*)

Calulate the offset into the device array for x,y pixel

**reset()**

Kill the display for 10MS

**sleep** (*value*)

Set the Software Shutdown Register bit

**Parameters** **value** – True to set software shutdown bit; False unset
