Adafruit CircuitPython module for the MPR121 capacitive touch breakout board.

CHAPTER 1

Dependencies

This driver depends on:

- [Adafruit CircuitPython](#)
- [Bus Device](#)

Please ensure all dependencies are available on the CircuitPython filesystem. This is easily achieved by downloading the [Adafruit library and driver bundle](#).

CHAPTER 2

Installing from PyPI

On supported GNU/Linux systems like the Raspberry Pi, you can install the driver locally [from PyPI](#). To install for current user:

```
pip3 install adafruit-circuitpython-mpu121
```

To install system-wide (this may be required in some cases):

```
sudo pip3 install adafruit-circuitpython-mpu121
```

To install in a virtual environment in your current project:

```
mkdir project-name && cd project-name
python3 -m venv .env
source .env/bin/activate
pip3 install adafruit-circuitpython-mpu121
```

CHAPTER 3

Usage Example

See usage in the `examples/mpr121_simpletest.py` file.

CHAPTER 4

Contributing

Contributions are welcome! Please read our [Code of Conduct](#) before contributing to help this project stay welcoming.

CHAPTER 5

Documentation

For information on building library documentation, please check out [this guide](#).

6.1 Simple test

Ensure your device works with this simple test.

```
1  # Simple test of the MPR121 capacitive touch sensor library.
2  # Will print out a message when any of the 12 capacitive touch inputs of the
3  # board are touched. Open the serial REPL after running to see the output.

26         # it will return True, otherwise it will return False.

class adafruit_mpr121.MPR121(*i2c*, *address=90*)

Driver for the MPR121 capacitive touch breakout board.

baseline_data(*pin*)

Return baseline data register value for the provided pin (0-11). Useful for debugging.

filtered_data(*pin*)

Return filtered data register value for the provided pin (0-11). Useful for debugging.

is_touched(*pin*)

Return True if the specified pin is being touched, otherwise returns False.

reset()

Reset the MPR121 into a default state ready to detect touch inputs.

touched()

Return touch state of all pins as a 12-bit value where each bit represents a pin, with a value of 1 being touched and 0 not being touched.

touched_pins

A tuple of touched state for all pins.

class adafruit_mpr121.**MPR121_Channel** (*mpr121, channel*)

Helper class to represent a touch channel on the MPR121. Not meant to be used directly.

raw_value

The raw touch measurement.

release_threshold

The release threshold.

threshold

The touch threshold.

value

Whether the touch pad is being touched or not.
